## Turkey: Cotton Textile and Product Exports Spur Record Consumption

Turkey's 2021/22 cotton consumption is forecast at a record 8.5 million bales and use is expected to grow more than 10 percent, well above the 3 percent consumption growth forecast for the world. Turkey is forecast to contribute a significant portion of the world's record 2021/22 consumption, behind only India in its year-over-year increase of 0.8 million bales. Logistical advantages, changes in global retailers' sourcing strategies, and duty-free access to the European Union (EU) are supporting robust cotton product and textile exports.

Despite global issues with ocean freight, Turkey's location is ideal relative to other cotton product and textile exporters. Turkey is near European and Middle East markets, with the EU being the world's second-largest importer of cotton products. Turkish exporters can also ship by rail or truck versus relying solely on ocean transit. Additionally, Turkey's Customs Union with the EU means that most textiles and clothing products can be exported duty-free to the EU and European Free Trade Association countries.

Outside of logistics, EU and U.S. retailers are actively restructuring their supply chains to rely less on manufacturers in Asia (particularly China). The United States is the world's largest importer of cotton products, and U.S. retailers are seeking to comply with the U.S. Withhold Release Order (WRO) on products containing any derivative of Xinjiang cotton. Compared with China and other major exporting countries in South and Southeast Asia (e.g., Bangladesh, Vietnam, and Cambodia), Turkey's supply chain from lint to finished fabric is mostly absent of Xinjiang lint.

Turkey cotton product and textile exports are booming despite widespread economic concerns. These include exchange rate fluctuations, rising energy costs, electricity cuts, cotton prices more than doubling (in local currency), and slower tourist activity (a significant contributor to domestic economic growth). Although the lira's plunge makes cotton lint imports and other inputs more expensive, the lower-valued currency also makes textile and product exports more affordable for foreign buyers. Despite these economic headwinds, lower priced exports continue to surge. With global retailers seeking alternative sources outside Asia and with Turkey's logistical advantages, these factors provide a strong foundation for 2021/22 consumption and beyond (see FAS-Ankara's most recent Cotton Update [here](#) for more information).

## 2021/22 Outlook

Global production is lowered from last month with smaller crops in India and Tanzania. Use is mostly unchanged and ending stocks are down more than 700,000 bales for the second consecutive month. Global trade is down slightly with lower U.S. exports and China imports for the second consecutive month.

U.S. production is unchanged at 17.6 million bales. Exports are reduced for the second consecutive month to 14.8 million bales, and the U.S. season-average farm price is unchanged at 90 cents per pound.

## Weekly Cotton Prices

Note: **A-Index** is the average of the five cheapest quotations (quality being Middling 1<sup>1/8</sup>) for Cost and Freight (CFR) at a Far Eastern Port (more information [here](#)); **U.S.** is the simple average of spot quotations reported by the Agricultural Marketing Service (more information [here](#)); **China** is the reported China Cotton Price Index (i.e. CCIndex 3128B) and reflects the national weighted average of cotton (3128B grade) delivered to more than 200 enterprises in China; **India** is the Shankar-6 (grade 29-3.8-76) spot price reported [here](#); **Brazil** is the delivered price in São Paulo city (grade strict low middling).

**Changes Since Jan. WASDE (cents per pound)**

	<b>A-Index</b>	<b>U.S.</b>	<b>China</b>	<b>India</b>	<b>Brazil</b>
11-Jan	128.7	112.7	159.9	126.5	119.7
7-Feb	140.8	121.6	162.2	132.8	134.2
<b>Change</b>	<b>12.1</b>	<b>8.9</b>	<b>2.3</b>	<b>6.2</b>	<b>14.5</b>

Global cotton prices rose since last month's *WASDE* with the A-Index exceeding 140 cents per pound, more than 50 cents above the same period last year. Brazil witnessed the most significant rise this month, climbing over 14 cents, owing to rapidly rising exports. Strong export sales, logistical constraints, and unfixed mill positions continue to support prices on the Intercontinental Exchange. Spot prices in China were marginally higher amid the slowdown from Lunar New Year. The A-Index is roughly 20 cents lower than domestic prices in China, compared with 30 cents last month, as the bulk of classed new-crop enters the domestic market.
